

f A E

The BeneVision N19 and N22, a pair of large, rugged monitors designed for use in the operating room, are the latest addition to the BeneVision family. These monitors are designed to provide a clear, high-contrast display of patient data, even in the bright, sterile environment of an operating room. The BeneVision N19 and N22 are both 19-inch and 22-inch monitors, respectively, and are designed to be used in a variety of settings, including the operating room, ICU, and emergency department. The BeneVision N19 and N22 are both designed to be used in a variety of settings, including the operating room, ICU, and emergency department. The BeneVision N19 and N22 are both designed to be used in a variety of settings, including the operating room, ICU, and emergency department.

BeneVision N19/N22

Advanced Patient Monitoring

Consider a Different Perspective

- Comprehensive patient monitoring - 100% uptime, 24/7/365
- Easy to use, intuitive interface - High quality, reliable data
- Advanced analytics - On-demand, real-time, actionable insights

Powerful Tools for Critical Diagnosis

Advanced patient monitoring solutions for critical diagnosis. Features include:

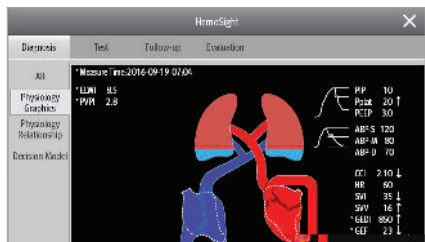

- SepsisSight™: Early detection of sepsis
- HemoSight™: Hemodynamic monitoring
- Atrial Fibrillation Summary Report: Comprehensive AF analysis

SepsisSight™

Advanced patient monitoring solution for early detection of sepsis. Features include:

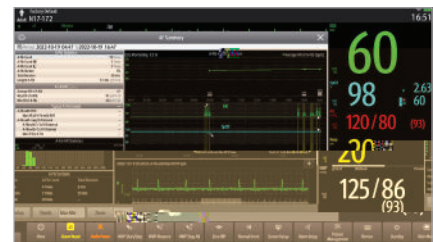

- Real-time monitoring of vital signs
- Early detection of sepsis
- Comprehensive patient monitoring

HemoSight™

Advanced patient monitoring solution for hemodynamic monitoring. Features include:

- Real-time monitoring of hemodynamic parameters
- Comprehensive patient monitoring
- Early detection of hemodynamic instability

Atrial Fibrillation Summary Report

Advanced patient monitoring solution for atrial fibrillation analysis. Features include:

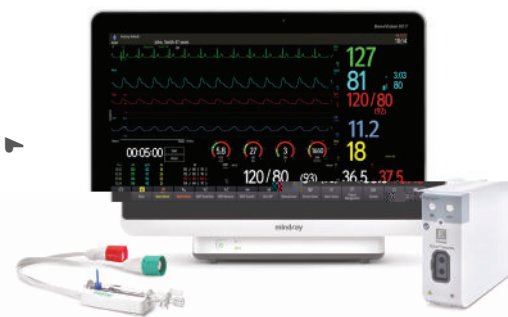

- Comprehensive analysis of atrial fibrillation episodes
- Real-time monitoring of AF risk
- Comprehensive patient monitoring

BeneVision N-Series with Integrated FloTrac™ Sensor from Edwards Lifesciences

Advanced patient monitoring solution with integrated FloTrac™ sensor. Features include:

- Real-time monitoring of hemodynamic parameters
- Comprehensive patient monitoring
- Early detection of hemodynamic instability

- Comprehensive patient monitoring
- Real-time monitoring of vital signs
- Early detection of sepsis
- Comprehensive patient monitoring
- Real-time monitoring of hemodynamic parameters

Advanced patient monitoring solution with integrated FloTrac™ sensor. Features include:

- Real-time monitoring of hemodynamic parameters
- Comprehensive patient monitoring
- Early detection of hemodynamic instability
