

## BeneHeart C1A

Semi-/Fully-Automatic AED (Automated External Defibrillator)

# Smarter & Faster

## Intuitive Design

Open the lid to power on

Up to 3 languages to select

Adult/child mode

Semi-automatic or fully automatic version- CPR mode can be configured to 130:2, 15:2 and hands-only  
 - Simple switching between adult-child mode- CPR metronome- CPR real-time feedback- CPR process encouragement can continuously encourage the rescuer and help to achieve the goal of saving a life just like a personal coach at side

Pre-connected adult/child electrodes

## Smart & Easy

### Intelligent ResQNavi™

For public rescue, the rescuer's proficiency in the resuscitation process often varies greatly. Rescuers who lack resuscitation experience need more detailed guidance, while experienced rescuers only need simple prompts and too complicated prompts might reduce the efficiency of these rescuers.

Based on a large number of user behavior and psychological research results, ResQNavi™ technology can evaluate the proficiency level of rescuers and provide targeted intelligent rescue navigation for different rescuers throughout the whole resuscitation process.

### User Interactive Rescue Guidance

BeneHeart C1A knows what you need. When the rescuer is too nervous or inexperienced and does not apply the pads for a long time, ResQNavi™ is able to recognize the challenge of the rescuer encounters in time, and provide more detailed operation guidance for the rescuer through the change of voice prompts.

Skilled rescuer

Remove clothing from patient's chest.

Apply pads as shown on pads.

Unskilled rescuer

Remove pads package from lid of AED. Tear open package. Apply pads as shown on pads.

Apply pads **firmly** to patient's **bare** chest as shown on pads.

.....

American Heart Association

# Faster & Powerful Shock

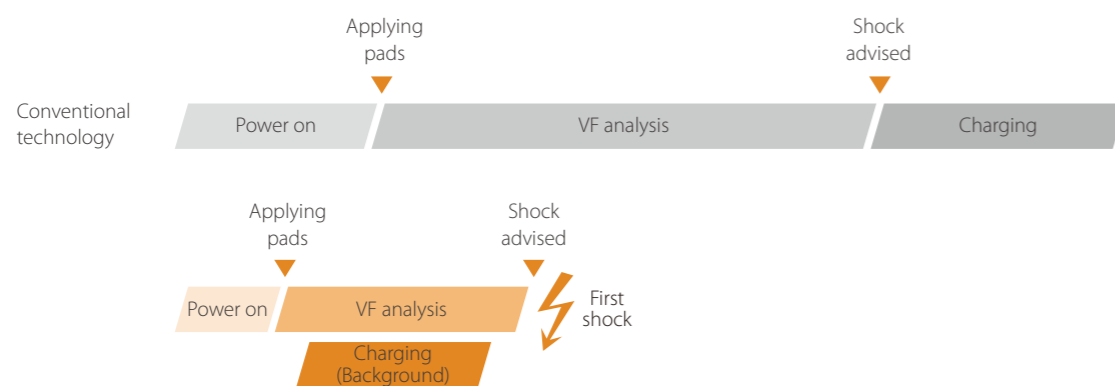

## QShock™-Faster Time to 1st Shock

Success rates for defibrillation drop every second. BeneHeart C1A is equipped with our new QShock™ technology. With the QShock™, BeneHeart C1A is able to increase the chance of a successful defibrillation. It only takes less than 8 seconds to deliver the first shock.<sup>2</sup>

## How can QShock™ technology achieve a faster first shock?

QShock™ not only greatly shortens the time of power-on and heart rhythm analysis but also performs synchronous pre-charging in the process of heart rhythm analysis. After the rhythm analysis is completed the energy can be delivered immediately without any delay, so that victims can get electric shock as soon as possible, and rescuers might feel more calm due to the shorter time for waiting.

<sup>2</sup> Not including the time of applying pads.  
<sup>3</sup> As device is pre-charged during ECG analysis.

## 360BTe-Higher Energy for Better Outcome

BeneHeart C series features 360J biphasic technology with auto-compensation according to patient impedance, which increases the chance to save difficult-to-defibrillate patients.

*If using a manual defibrillator capable of escalating energies, higher energy for second and subsequent shocks may be considered.*  
 -- 2015 AHA Guideline, Part 7

*... a larger study showed termination rates of rebrillation declined when using repeated 200J shocks, unless an increased energy level (360J) was selected. Human studies have not shown harm (raised biomarkers, ECG changes, ejection fraction) from any biphasic waveform up to 360J.*  
 -- 2015 ERC Guideline, Section 3

200J works for many people, but does not work for everyone.  
**360J works while 200J failed.**

# Reliable & Durable Quality

BeneHeart C1A has passed a series of rigorous tests. Its reliable quality makes BeneHeart C1A able to face a variety of challenges of severe environments with great confidence.

6-surface 1.5m drop test

IP55 water-/dust-proof

Meets all standards for helicopter and other transport

BeneHeart C1A is equipped with high quality consumables. The durable battery and pads have a life cycle up to 5 years, which results in lower total cost of ownership.
